Week 4

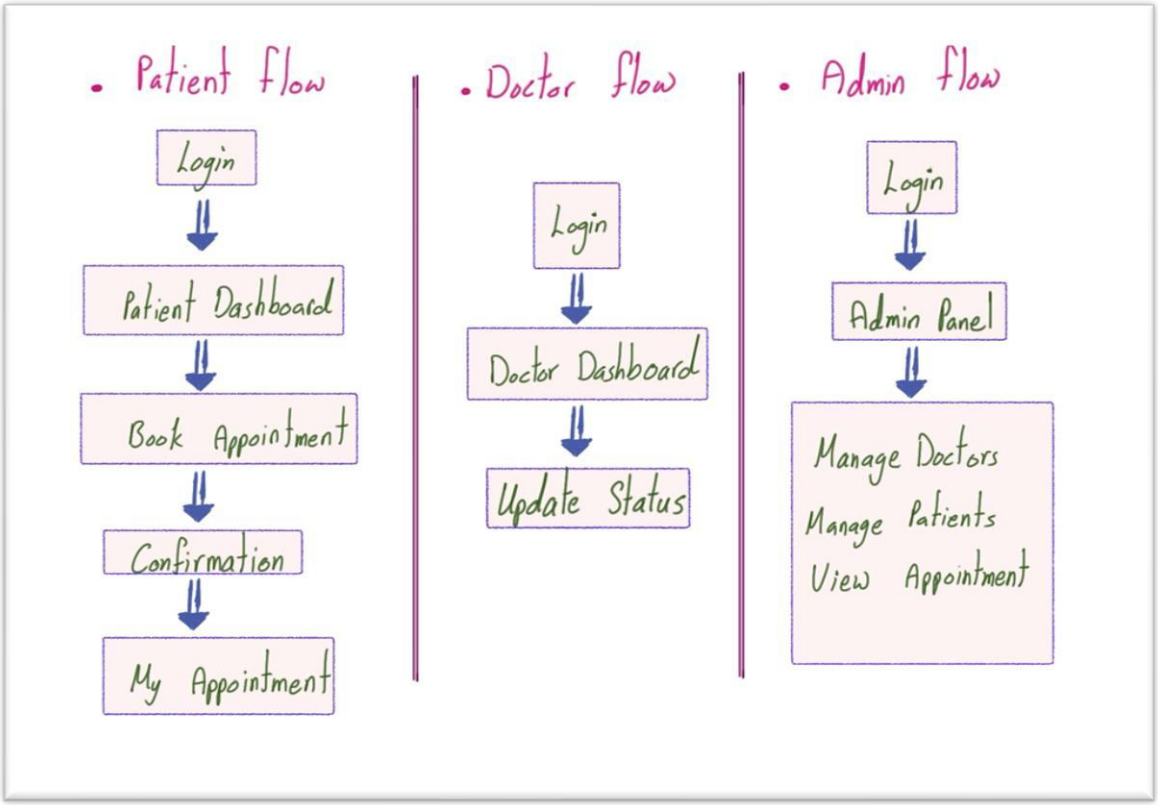
Team Name: MedCare Team

Team Members:

- Mlaak Al-Shawa
- Lama Hajaj
- Aya Ali

Based on week4 assignment, we done the following:

1. User flow mapping: we developed the user flow to show the navigation for each role which helps us do the wireframe designs.



- Our user flow logic is divided into three flows based on the roles: patient, doctor and admin:

- **Patient Flow:** Login -> Patient Dashboard -> Book Appointment -> Confirmation -> My Appointment.
- **Doctor Flow:** Login -> Doctor Dashboard -> Update Status (to manage patient visits, will be clear in the UI wireframes).

- **Admin Flow:** Login -> Admin Panel -> Management of Doctors, Patients, and View All Appointments**.**

2. UI Wireframe designs: We created the core system interfaces based on the user flow above, including:

1. Login screen
2. patient, doctor and admin dashboard
3. Appointment booking
4. Updating appointment statuses
5. View appointments

These wireframes were designed using a UI design tool to establish the layout which will be converted in the next weeks to frontend development with **HTML, CSS, and JavaScript**.
